

TENNESSEE CLEAN WATER NETWORK

Protect our waters from toxic pollutants **SB1331 (Yager) / HB1204 (McCord)**

This bill would mandate the adoption of a weak and outdated water quality standard for a toxic pollutant – selenium.

Kingston Fossil Plant – Coal ash contains selenium and it was dumped into our waters when the spill occurred.

Let the experts make the decisions, not the legislators – this is an issue of science. Selenium is a dangerous toxic which accumulates in fish and other aquatic organisms. It causes serious and permanent damage to aquatic life.

Don't let the state legislators allow more of a dangerous toxic – prevalent in the runoff from coal mining sites – into our waters.

Protect our waters from more pollution!
